0.1 Introduction

This project consists of the realization of an LED panel that displays the text "Caveau". It is intended to be used at parties and mounted on a wall.

0.2 Specifications

The panel must meet the following requirements:

- Must operate from a 230 VAC power supply.
- Must be visible during both daytime and nighttime.
- Must display the text "Caveau".

0.3 Design

In this section, the design of the panel is chosen.

0.3.1 Sketch

First, a sketch is drawn, the idea here is to place the main elements as well as define the main dimensions.

The figure 1 shows the text "Caveau" with an arrow. It also includes a logo representing the company's emblem. This figure shows the front view of the panel.

The idea is to have three distinct layers.

1. A thin layer of wood capable of letting light through.

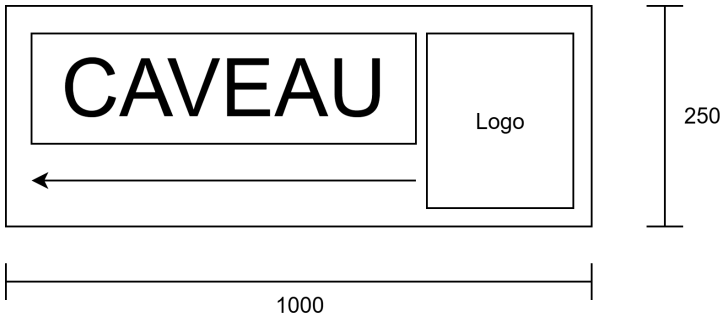

Figure 1: Front view

Figure 2: Side view

2. A mask layer, 3D printed, which serves to focus the light into the desired shape.

3. A LED layer consisting of a simple plane where the LEDs are mounted in a pattern matching the mask.
